

FOR IMMEDIATE RELEASE:

Phenix Software Technologies Develops Software for United States Naval Academy Exhibit

Annapolis, Maryland, May 9, 2016 - On the afternoon of May 9, 2016, a ribbon cutting ceremony was held at the United States Naval Academy Halsey Field House to open the newly renovated Quarterdeck complementing the Armel-Leftwich Visitor Center. Visitors to the Naval Academy can now explore an interactive multimedia exhibit that showcases photos and videos of midshipman life.

"The goal was to make a first impression, whether they're a candidate, a visitor, or a graduate" said Vice Admiral. Walter E. "Ted" Carter, the Academy Superintendent. "It's a walking path that tells the story of this institution."

Vice Admiral Walter E. "Ted" Carter cuts the ribbon for the official opening of the exhibit at the Naval Academy Halsey Field House.

As part of the exhibit, Phenix Software designed and developed an interactive database kiosk application, "Midshipmen In Review", that allows visitors to query activities in which midshipmen participated while attending the Academy. The information cataloged in the kiosk database includes sporting activities, sporting and academic awards, and various extracurricular activities dating back to the inception of the Naval Academy in 1845. In addition to designing and coding the database application, Phenix Software was responsible for data migration and collection of data, including capturing graduating photographs of each Midshipman, as well as, sport team photographs.

Phenix Software is currently under contract to capture and migrate the related data for the upcoming graduating class of 2016.

The kiosk development effort was sponsored by the United States Naval Academy Alumni Association and Foundation, overseen by David E. Church, Director of Special Projects, United States Naval Academy Alumni Association.

About Phenix Software Technologies

Phenix Software Technologies is a small software consulting firm founded in 1998 and located in Baltimore, Maryland. Phenix Software specializes in custom application development. In particular, database applications supporting a wide variety of business and personal software needs. In addition to custom development, PST provides integrated 'off the shelf solutions' to solve a variety of business problems.
